I 次の文を読んで、後の設問に答えなさい。

It was April Fool's Day and Saburo decided to play a trick on his friend, Patrick. When Saburo met Patrick, he said, "I thought you ought to know, Patrick, that the store on the corner is paying 10 yen for each empty plastic bottle. If you've got any bottles lying around the house, I'd take them to the shop if I were you."

Patrick didn't realize how unlikely this was. He was always hard up for money, so he quickly collected every old plastic bottle he could find and took them down to the shop.

"I'm told you're paying 10 yen per bottle," he said to the shopkeeper. "Well, here's 200 yen's worth."

The shopkeeper looked at him as if he were mad and then said, "I think someone's made an April Fool of you, young man."

At first Patrick was angry, but then he understood the joke and decided to get his revenge. He hurried back to Saburo and thanked him for the information. Saburo, who was ready to laugh, was puzzled to see Patrick so happy.

"Did you go to the shop?" he asked.

"Yes," Patrick said. "But you were wrong about the shopkeeper paying 10 yen. He's paying only 8 yen, but it's still money for nothing." He smiled and went away.

As soon as he had gone, Saburo began to collect as many old plastic bottles as possible. In addition, he even asked his neighbors if they had any.
